Figure 1 displays a 4x4 grid of small tables, each representing a different combination of the four variables: 'Number of children', 'Number of children in the household', 'Number of children in the household', and 'Number of children in the household'. Each small table has a header row with 'Number of children' and 'Number of children in the household', and a body with 16 rows and 16 columns. The cells contain numerical values representing the probability of a child being in a certain category.
